

DELOSPERMA

Delosperma is a genus in the family Aizoaceae and it originates from South Africa. It is a branchy dwarf succulent which bears numerous flowers similar to little red, yellow or white daisies. They open up with sunlight and close their petals with the dark. Its leaves are fleshy, thin and elongated; since the vegetation never reaches excessive dimensions, this plant is ideal for long-lasting, resistant blooming borders. The variety "Cooperi" is known for being perennial and for its large, fuchsia flowers.
